Pride Ranger

The Ranger from Pride is at home on rough terrain and off road conditions as it features enhanced front and rear suspension, a very high ground clearance and even come with a reversing sensor all fitted as standard.

The off road ability has been enhanced due to the fact that the rear wheels are not connected via a transaxle but run on individual motors providing traction like a four wheel drive vehicle and with the chunky tyres allows the ranger to take on much more than any other mobility scooter around.

Normally fitted with 75amp batteries which provide up to 25miles per charger, the Ranger can be upgraded to 100amp batteries giving even more distance for longer trips when exploring.

Even though the Ranger is designed to be rugged, it still feels light and is easy to control via the delta handle bars which has all the buttons at your fingertips and a LCD display which shows instance details such as your speed and battery level plus lots more!
